These verbs all suppose some antecedent state of suffering or sorrow. *Console* is confined to the act of giving relief to the mind under affliction or sorrow, and points to some definite source of that relief, as, the presence of his friend *consoled* him: he was much *consoled* by this intelligence, &c. *Comfort* points to relief afforded by the communication of positive pleasure, as well as the diminution of pain, as "they brought the young man alive, and were not a little *comforted*." *Acts* xx. 12. *Solace* is from *solatium*, which means, according to Dunesnil, consolation inwardly felt or applied to the ease of the sufferer. ☞ Although the orthoepists declare themselves to be in favor of pronouncing this word and others of similar formation (as *alternate*, *compensate*, *concentrate conspicate*, *extirpate*, &c) with the accent on the second syllable, it would better accord with analogy to place the accent on the first syllable, for these words do not come to us directly, as seems to be commonly supposed from *contemplor*, *alterno*, *compenso*, &c, but from their participles, *contemplatus*, *alternatus*, *compensatus*, &c, in which the principal accent is on the last syllable but one, and a secondary accent on the first syllable Now, it is a general rule of our language that, when a polysyllable is formed from the Latin by dropping a syllable, the principal accent of the English word coincides with the secondary accent of the Latin, as, for example, in *parsimony* from *parsimonia* It is therefore decidedly preferable to say *contemplate alternate compensate*, &c instead of *contemplate alternate*, *compensate* &c Nor in most cases, does usage though somewhat divided, forbid us to do so In the United States there is a large and increasing number of cultivated speakers who give the antepenultimate accentuation to these and other words of the same class and the practice of most English scholars of the present day is the same See § 117
